Appion - Bug #1734

Make showRefineJobInfo work in checkRefineJobs.php

04/16/2012 09:50 PM - Amber Herold

Status: Closed
Priority: Normal
Assignee: Amber Herold
Category: Web interface
Target version: Appion/Leginon Future Version
Affected Version: Appion/Leginon 2.2.0
Show in known bugs: No

Description
I think checkRefineJobs used to show some details about completed iterations while jobs were still running...or maybe something else. There are 3 commented out functions: showFrealignJobInfo, showEMANJobInfo, and showXmippJobInfo.

I have no idea if they still work. most likely not.

These don't work any more because refactoring dumbs them down to only look at xxxx_reconx.appionjob.log. I wrote into refineJob base class to log some errors into xxxx_reconx.appionjob.log and used that for EMAN. Will need to look at individual cases where the error would present themselves to get them log into the same place.

#2 - 06/20/2012 01:01 PM - Anchi Cheng
r16816 Added a minimal help in this case by adding a link to the standard checkAppionJob.php since the progress would show up there in xxxx_recon.appionjob.log if the job file log the task progress there.
