Appion - Bug #785

myamiweb setup wizard need to modify define('GP_USER', 'users') in config.php correctly

07/27/2010 05:27 PM - Anchi Cheng

| Status: | Won't Fix or Won't Do |
| Priority: | Normal |
| Assignee: | Eric Hou |
| Category: | |
| Target version: | Appion/Leginon Future Version |
| Affected Version: | Appion/Leginon 2.0.2 |
| Start date: | 07/27/2010 |
| Due date: | |
| % Done: | 0% |
| Estimated time: | 0.00 hour |
| Spent time: | 0.00 hour |
| Workaround: | 1. If they don't have a "users" group, they can create a new group called "users", and set the privilege to "Administrate/view only owned projects and view shared experiments".
2. If they already have "users" group, and the users group has other privilege than the default users privilege, they need to create a new group for default user and set the privilege to "Administrate/view only owned projects and view shared experiments". Then edit the config.php line 74, change the 'users' to the new group name they just created. |

Show in known bugs: Yes

Description

We can not assume that past users creates any group other than the one administrator user is in. Current upgrade gives all other available groups user privilege, but retain their group name for obvious reason.

Setup wizard should know how to deal with each of these situations:
1. only one group (will have administrators privilege after schema-r127857.py)
2. more than one group but no group is named 'users'
3. more than one group and the group the administrator user is in is called 'users'. This will cause new users to default with administrator privileges.
4. more than one group and a group other than the administrator group is called 'users'.

History

#1 - 08/02/2010 03:09 PM - Eric Hou
- Status changed from New to Assigned

For now before this issue got fixed, the upgrade users can do:

1. If they don't have "users" group, they can create a new group call "users", and set the privilege to "Administrate/view only owned projects and view shared experiments".
2. If they already have "users" group, and the users group has other privilege than the default users privilege, they need to create a new group for default user and and set the privilege to "Administrate/view only owned projects and view shared experiments". Then edit the config.php file on line 74. Change the 'users' to the new group name they just created.

Thanks.

Eric

03/18/2020 1/2
#4 - 08/02/2010 03:13 PM - Amber Herold
- Target version changed from Appion/Leginon 2.1.0 to Appion/Leginon Future Version

#5 - 11/10/2010 02:19 PM - Eric Hou
- Status changed from Assigned to Won't Fix or Won't Do

This only effect to people using old version of the Leginon or Appion. Right now, all the external users should be fine
